# 74ACT16541

# 16-Bit Buffer/Line Driver with 3-STATE Outputs

## **General Description**

The ACT16541 contains sixteen non-inverting buffers with 3-STATE outputs designed to be employed as a memory and address driver, clock driver, or bus oriented transmitter/receiver. The device is byte controlled. Each byte has separate 3-STATE control inputs which can be shorted together for full 16-bit operation.

## **Features**

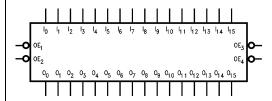

- Separate control logic for each byte
- Outputs source/sink 24 mA
- TTL-compatible inputs

## **Ordering Code:**

	Order Number	Package Number	Package Description	
	74ACT16541SSC	MS48A	48-Lead Small Shrink Outline Package (SSOP), JEDEC MO-118, 0.300" Wide	
74ACT16541MTD MTD48 48-Lead Thin Shrink Small Outline Package (TSSOP), MO-153, 6.1mm				

Device also available in Tape and Reel. Specify by appending suffix letter "X" to the ordering code.

## **Functional Description**

The ACT16541 contains sixteen non-inverting buffers with 3-STATE standard outputs. The device is byte controlled 3-STATE standard outputs. The device is byte controlled with each byte functioning identically, but independent of the other. The control pins can be shorted together to obtain full 16-bit operation. The 3-STATE outputs are controlled by an Output Enable  $(\overline{OE}_n)$  input for each byte. When  $\overline{OE}_n$  is LOW, the outputs are in 2-state mode. When  $\overline{\text{OE}}_{n}$  is HIGH, the outputs are in the high impedance mode, but this does not interfere with entering new data into the inputs.

V<sub>CC</sub> @ 4.5V, 5.5V

Note 1: Absolute maximum ratings are those values beyond which damage to the device may occur. The databook specifications should be met, without exception to ensure that the system design is reliable over its power supply, temperature, and output/input loading variables. Fairchild does not recommend operation of FACT™ circuits outside databook specifications.
