• DESCRIPTION AND APPLICATIONS

The LP3000SOT89 is a packaged Aluminum Gallium Arsenide / Indium Gallium Arsenide (AlGaAs/InGaAs) pseudomorphic High Electron Mobility Transistor (pHEMT). It utilizes a 0.25 μm x 3000 μm Schottky barrier gate, defined by electron-beam photolithography. The recessed “mushroom” gate structure minimizes parasitic gate-source and gate resistance. The epitaxial structure and processing have been optimized for reliable high-power applications. The LP3000 also features Si₃N₄ passivation and is available in die form or in other packages.

Typical applications include PCS/Cellular low-voltage, high-efficiency amplifiers.

Notes:

- Operating conditions that exceed the Absolute Maximum Ratings could result in permanent damage to the device.
- Power Dissipation defined as: $P_{TOT} \equiv (P_{DC} + P_{IN}) - P_{OUT}$, where
 P_{DC} : DC Bias Power
 P_{IN} : RF Input Power
 P_{OUT} : RF Output Power
- Absolute Maximum Power Dissipation to be de-rated as follows above 25 $^{\circ}\text{C}$:
 $P_{TOT} = 3.75\text{W} - (0.025\text{W}/^{\circ}\text{C}) \times T_{HS}$
 where $T_{PACK} = \text{source tab lead temperature..}$
- This PHEMT is susceptible to damage from Electrostatic Discharge. Proper precautions should be used when handling these devices.

- HANDLING PRECAUTIONS**

To avoid damage to the devices care should be exercised during handling. Proper Electrostatic Discharge (ESD) precautions should be observed at all stages of storage, handling, assembly, and testing. These devices should be treated as Class 1A (0-500 V). Further information on ESD control measures can be found in MIL-STD-1686 and MIL-HDBK-263.
