

---

**MSM7708-02**

---

**Serial Register Interface ADPCM CODEC for Telephone Recording**

---

**GENERAL DESCRIPTION**

The MSM7708-02 is a CMOS IC developed for applying to PHS (Personal Handyphone System). This device provides a CODEC function which performs transcoding between the voice band analog signal and 32 kbps ADPCM data. It also provides a serial register interface function for telephone call recording.

Provided with such functions as DTMF tone and several kinds of tone generation, transmit/receive data mute and gain control, side-tone pass, and voice/silence detection, the MSM7708-02 is best suited for PHS handsets.

**FEATURES**

- Single 3 V power supply operation ( $V_{DD}$ : 2.7 V to 3.6 V)
- Low power consumption
  - When system is operating: 6 mA typ.
  - When powered down: 0.02 mA typ.

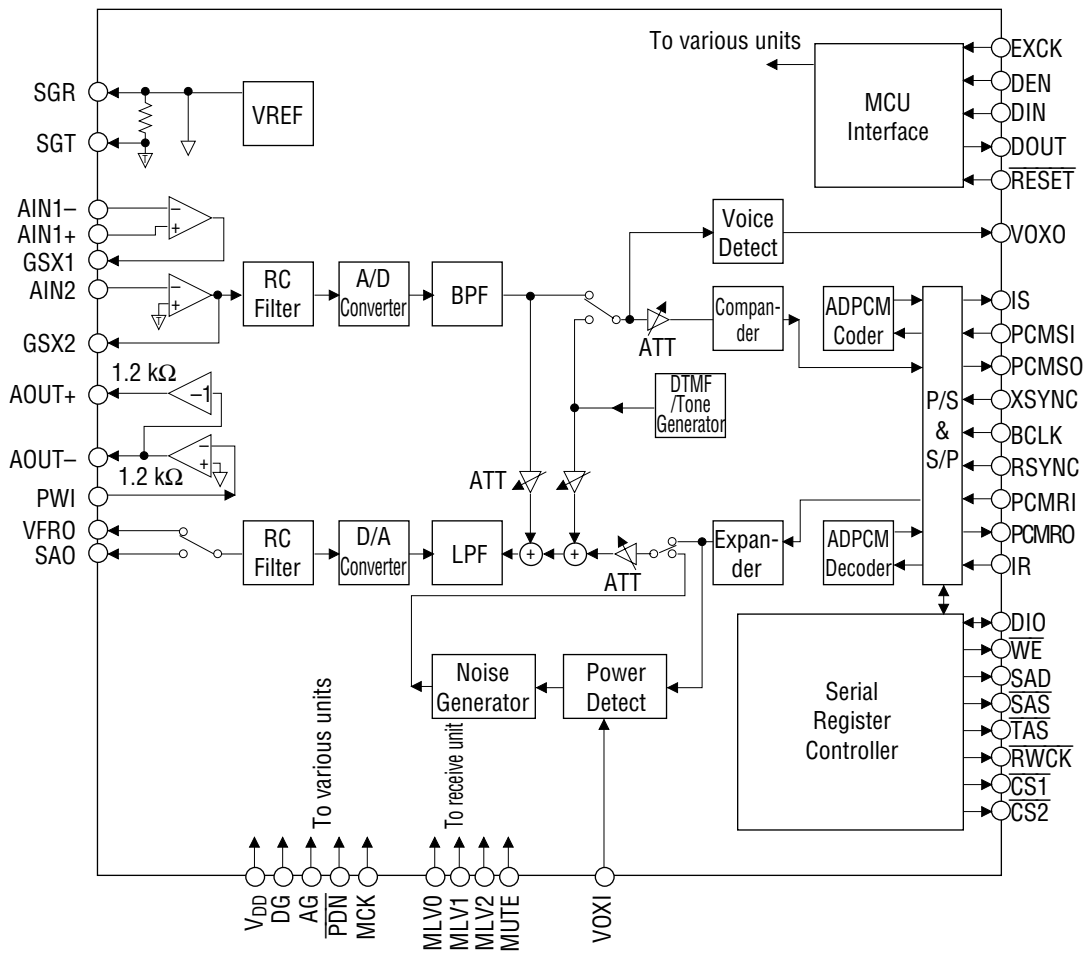

(ADPCM CODEC)

- ADPCM: ITU-T Recommendations G.721 (32 kbps)
- Transmit/receive full duplex capability
- PCM interface code format:  $\mu$ -law or A-law selectable
- Serial ADPCM and PCM transmission rate: 64 kbps to 2,048 kbps
- Transmit/receive mute function; transmit/receive programmable gain setting
- Side tone generator (8-step level adjustment)
- Built-in DTMF tone, ringing tone, and various tone generators
- Built-in VOX function

(Serial Register Interface)

- Interface for a serial register: 1 Mb (MSM63V89C), 4 Mb (MSM6684), 8 Mb (MSM6685)
- Interface for a serial voice ROM: 1 Mb (MSM6595A), 2 Mb (MSM6596A), 3 Mb (MSM6597A)
- Maximum recording time: 32 s (1 Mb), 128 s (4 Mb), 256 s (8 Mb)
- Maximum recording channels: 32 ch
- Playback data transmit/receive selectable
- Package:
  - 64-pin plastic TQFP (TQFP64-P-1010-0.50-K) (Product name : MSM7708-02TS-K)

**BLOCK DIAGRAM**

**PIN CONFIGURATION (TOP VIEW)**

64-Pin Plastic TQFP

NC : No connect pin

## PIN DESCRIPTIONS

Pin	Symbol	Type	Description
1	AG	I	Analog ground
2	NC	—	No connection
3	SAO	O	Receive side sounder amplifier output
4	NC	—	No connection
5	NC	—	No connection
6	VFRO	O	Receive side voice output
7	PWI	I	Receive side voice amplifier input
8	AOUT-	O	Receive side voice amplifier output (-)
9	AOUT+	O	Receive side voice amplifier output (+)
10	SGR	O	Receive side analog signal ground
11	NC	—	No connection
12	SGT	O	Transmit side analog signal ground
13	AIN1-	I	Transmit side amplifier 1 inverting input
14	GSX1	O	Transmit side amplifier 1 output
15	AIN1+	I	Transmit side amplifier 1 non-inverting input
16	NC	—	No connection
17	NC	—	No connection
18	GSX2	O	Transmit side amplifier 2 output
19	AIN2	I	Transmit side amplifier 2 inverting input
20	V <sub>DD</sub>	I	Power supply
21	NC	—	No connection
22	MLV2	I	Receive side voice path mute level set
23	MLV1	I	Receive side voice path mute level set
24	MLV0	I	Receive side voice path mute level set
25	MUTE	I	Receive side voice path mute enable signal input
26	NC	—	No connection
27	VOXI	I	Receive side voice/silence detect function input
28	VOXO	O	Transmit side voice/silence detect function output
29	NC	—	No connection
30	DEN	I	Enable signal input for control register
31	EXCK	I	Clock signal input for control register
32	NC	—	No connection
33	NC	—	No connection
34	DIN	I	Address and data input for control
35	DOUT	O	Data output for control register
36	$\overline{\text{RESET}}$	I	$\overline{\text{RESET}}$ control input for control register
37	$\overline{\text{PDN}}$	I	Power down control input
38	MCK	I	Master clock input
39	NC	—	No connection
40	PCMRI	I	Receive side PCM signal input

**PIN DESCRIPTIONS (Continued)**

<b>Pin</b>	<b>Symbol</b>	<b>Type</b>	<b>Description</b>
41	PCMRO	0	Receive side PCM signal output
42	NC	—	No connection
43	IR	I	Receive side ADPCM signal input
44	IS	0	Transmit side ADPCM signal output
45	NC	—	No connection
46	PCMSI	I	Transmit side PCM signal input
47	PCMSO	0	Transmit side PCM signal output
48	NC	—	No connection
49	DG	I	Digital ground
50	NC	—	No connection
51	XSYNC	I	Transmit side PCM and ADPCM data sync signal input
52	RSYNC	I	Receive side PCM and ADPCM data sync signal input
53	BCLK	I	PCM and ADPCM data shift clock input
54	NC	—	No connection
55	$\overline{CS2}$	0	Voice ROM chip select output
56	$\overline{CS1}$	0	Serial register chip select output
57	$\overline{RWCK}$	0	Serial register data clock output
58	$\overline{TAS}$	0	Serial register transfer address-strobe output
59	$\overline{SAS}$	0	Serial register address-strobe output
60	SAD	0	Serial register address data output
61	NC	—	No connection
62	$\overline{WE}$	0	Serial register write enable output
63	DIO	I/O	Serial register data input/output
64	NC	—	No connection

## PIN AND FUNCTIONAL DESCRIPTIONS

### **AIN1+, AIN1-, AIN2, GSX1, GSX2**

The transmit analog input and the output for transmit gain adjustment.

The pin AIN1- (AIN2) connects to inverting input of the internal transmit amplifier, and the pin AIN1+ connects to non-inverting input of the internal transmit amplifier. The pin GSX1 (GSX2) connects to output of the internal transmit amplifier. Gain adjustment should be referred to Fig. 1.

### **VFRO, AOUT+, AOUT-, PWI**

Used for the receive analog output and the output for receive gain adjustment.

VFRO is an output of the receive filter. AOUT+ and AOUT- are differential analog signal outputs which can directly drive  $Z_L = 350 \Omega + 120 \text{ nF}$  or the  $1.2 \text{ k}\Omega$  load. Gain adjustment should be referred to Fig. 1.

These outputs are in high impedance state during power down.

**SAO**

Differential analog output for a sounder.

Variable tones including "Audio sound", "DTMF tone", "S tone", "F tone", and "R tone", and telephone call signals can be output to either VFRO pin or SAO pin by CR0 - B1 of the control register. These output pins are in the high impedance state during power down.

**Figure 1 Analog Interface**

**SGT, SGR**

Outputs of the analog signal ground voltage.

SGT outputs the analog signal ground voltage of the transmit system, and SGR outputs the same for the receive system. The output voltage value is approximately 1.4 V. Connect bypass 10  $\mu$ F and 0.1  $\mu$ F (ceramic type) capacitors between these pins and the AG pin. To reduce the response time of the receiver power on, it is recommended to apply 1  $\mu$ F and 0.1  $\mu$ F bypass capacitors. During power down, the output changes to 0 V.

**V<sub>DD</sub>**

Power supply.

**DG, AG**

Ground.

DG is the digital system ground. AG is the analog system ground. Since DG and AG are separated in the device, connect them as close as possible on the circuit board.

 **$\overline{\text{PDN}}$** 

Power down control input.

When set to a digital "0", the system changes to the power down state and control register is not reset. Since the power down mode is controlled by CRC0 - B5 of the control register ORed with the signal from the  $\overline{\text{PDN}}$  pin, set CRC0 - B5 to digital "0" when using this pin.

 **$\overline{\text{RESET}}$** 

Reset control input of the CODEC control register.

When set to digital "0," each bit of the control register is reset and the internal circuit changes to the power down state. During normal operation, set this pin to digital "1".

**MCK**

Master clock input.

The clock frequency is 19.2 MHz. MCK can be asynchronous with XSYNC, RSYNC, and BCLK.

**PCMSO**

Transmit PCM data output.

This PCM output signal is output from MSB synchronously with the rising edge of BCLK and XSYNC.

**PCMSI**

Transmit PCM data input.

This signal is converted to the ADPCM data. The PCM signal is shifted in on the falling edge of BCLK. Normally, this pin is connected to PCMSO.

**PCMRO**

Receive PCM data output.

This PCM signal is the output signal after ADPCM decoder processing. This signal is serially output from MSB synchronously with the rising edge of BCLK and RSYNC.

**PCMRI**

Receive PCM data input.

This PCM input signal is shifted in on the rising edge of BCLK and is input from MSB. Normally, this pin is connected to PCMRO.

**IS**

Transmit ADPCM signal output.

This signal is the output signal after ADPCM encoding, and is serially output from MSB synchronously with the rising edge of BCLK and XSYNC. This pin is an open drain output which remains in a high impedance state during power down. It requires pull-up resistor.

**IR**

Receive ADPCM signal input.

This input signal is shifted in serially on the rising edge of BCLK synchronously with RSYNC and is input from MSB.

**BCLK**

Shift clock input for the PCM data (PCMSO, PCMSI, PCMRO, PCMRI) and the ADPCM data (IS, IR). The frequency is in the 64 kHz to 2048 kHz range.

**XSYNC**

8 kHz synchronous signal input for transmit PCM and ADPCM data.

This signal should be synchronized with BCLK. XSYNC is used for indicating the MSB of the transmit serial PCM and ADPCM data stream.

**RSYNC**

8 kHz synchronous signal input for receive PCM and ADPCM data.

This signal should be synchronized with BCLK signal. RSYNC is used for indicating the MSB of the receive serial PCM and ADPCM data stream.

**VOXO**

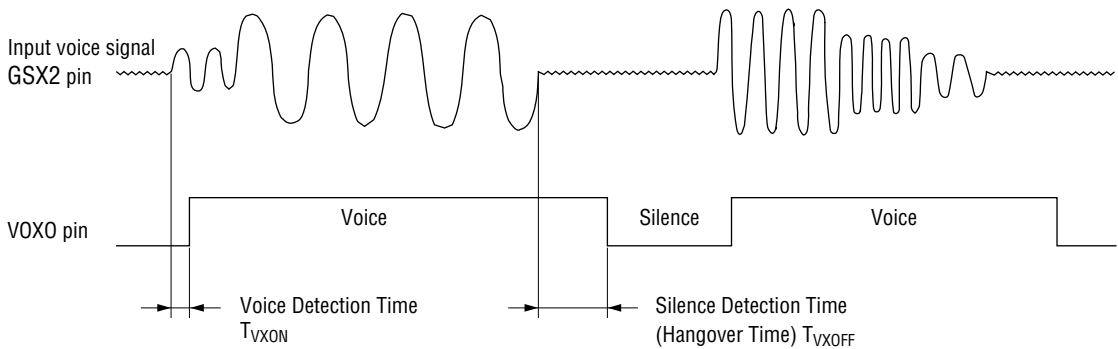

Transmit side voice/silence detect signal output.

This output is valid when CR6 - B7 is set to "1". VOXO shows the presence or absence of the transmit voice signal by detecting the signal. "1" and "0" set to this pin correspond to the presence and the absence, respectively. This result also appears at the register data CR7 - B7. The signal detect threshold is set by the control register CR6 - B6, B5. When control register CR0 - B6 is set to "1" and VOXI input is "1" during the voice detection (VOXO = "1"), receive signal is automatically suppressed by 6 dB.

**VOXI**

Receive side voice/silence detect signal input.

This output is valid when CR6 - B7 is set to "1". A "1" level at VOXI indicates the presence of voice signal, in which case the decoder block processes normal receive signal and the voice signal appears at analog output pins. A "0" level indicates the absence of voice signal, in which case the background noise generated in this device is transferred to the analog output pins. The background noise amplitude is set by the control register CR6 - B1, B0. Since this signal is ORed with the register CR6 - B3, set the control register CR6 - B3 to "0" when using this pin. When control register CR0 - B6 is set to "1" and VOXI input is "1" during the voice detection (VOXO = "1") receive signal is automatically suppressed by 6 dB.

(a) Transmission Side Voice/Silence Detect Function Timing Diagram

(b) Receive Side Voice/Silence Detect Function Timing Diagram

Note: The VOXO and VOXI pin functions are enabled when CR6 - B7 is set to "1".

**Figure 2 Voice/Silence Detect Function**

**DEN, EXCK, DIN, DOUT**

Serial control ports for MCU interface.

Reading and writing data is performed by an external CPU through these pins. 14-byte control registers (CR0 - 13) are provided in this device.

DEN is the "Enable" control signal input, EXCK is the data shift clock input, DIN is the address and data input, and DOUT is the data output.

Input/output timing is shown in Fig. 3.

(a) Write Data Timing Diagram

(b) Read Data Timing Diagram

**Figure 3 MCU Interface Input/Output Timing**

**MUTE**

This pin is used to enable the receive side voice path mute level. To set the mute level, set this pin to "1".

**MLV0, MLV1, MLV2**

This pin is used to set the receive side voice path mute level.

For the control method, refer to the control register description (CR1). Since these signals are ORed with CR1 - B2, B1, and B0 internally, set these register data to "0" when using this pin.

The register map is shown in Table 1.

**Table 1 Control Register (CR0 to CR13) Map**

Register Name	Address				Data Description								R/W

Note : Details are explained in the Control Register Description.

R/W: Both read and write are supported R: Read-only register

**(Register Controllers)****DIO**

This I/O pin is used to output the write data and fetch the read data. Connect this pin to the DIN and DOUT pins of the serial register and to the DOUT pin of the serial voice ROM.

 **$\overline{\text{WE}}$** 

This output pin is used to select the read or write mode. Connect this pin to the  $\overline{\text{WE}}$  pin of the serial register.

**SAD**

This pin is used to output the read/write start address data. Connect this pin to the SAD pin of the serial register and to the SADX pin of the serial voice ROM.

 **$\overline{\text{SAS}}$** 

This clock output pin is used to write the serial address. Connect this pin to the  $\overline{\text{SAS}}$  pin of the serial register and to the  $\overline{\text{SASX}}$  and  $\overline{\text{SASY}}$  pins of the serial voice ROM.

 **$\overline{\text{TAS}}$** 

This output pin is used to set the serial address input from the SAD pin into the address counter inside the serial register/serial voice ROM. Connect this pin to the  $\overline{\text{TAS}}$  pin of the serial register/serial voice ROM.

 **$\overline{\text{RWCK}}$** 

This clock output pin is used to write or read data to or from the serial register. Connect this pin to the  $\overline{\text{RWCK}}$  pin of the serial register and to the  $\overline{\text{RDCK}}$  pin of the serial voice ROM.

 **$\overline{\text{CS1}}$ ,  $\overline{\text{CS2}}$** 

$\overline{\text{CS1}}$  and  $\overline{\text{CS2}}$  are chip select pins. Connect  $\overline{\text{CS1}}$  to the  $\overline{\text{CS}}$  pin of the serial register, and  $\overline{\text{CS2}}$  to the  $\overline{\text{CS}}$  pin of the serial voice ROM.

## FUNCTIONAL DESCRIPTION

### Control Register Description

#### (1) CR0 (Basic Operation Mode Settings)

	<b>B7</b>	<b>B6</b>	<b>B5</b>	<b>B4</b>	<b>B3</b>	<b>B2</b>	<b>B1</b>	<b>B0</b>
CR0	A/ $\mu$ SEL	—	PDN ALL	PDN TX	PDN RX	SA, VF OUT	SAO/ VFRO	AOUT PON
Initial value	0	0	0	0	0	0	0	0

- B7: ..... PCM interface companding law selection    0:  $\mu$ -law 1: A-law
- B6: ..... Automatic suppression function control    0: suppression off  
1: suppression on  
When transmit voice is detected, receive level is suppressed automatically by 6 dB.
- B5: ..... Power down (entire unit)    0: Power ON    1: Power down  
ORed with the inverted external power down signal. When using this data, set  $\overline{\text{PDN}}$  to "1".
- B4: ..... Power down (transmit side only)    0: Power ON    1: Power down
- B3: ..... Power down (receive side only)    0: Power ON    1: Power down
- B2: ..... The sounder output amp (SAO) and receiver system output amp (VFRO) operation control  
0: The output pin selected by CR0 - B1 operates.  
1: The sounder system output (SAO) and receiver system output (VFRO) both operate.
- B1: ..... Selection of sounder system output (SAO) or receiver system output  
0: VFRO                    1: SAO  
SGR potential is output to the non selected pin.
- B0: ..... AOUT+, AOUT- power on control  
0: AOUT+, - power down  
1: AOUT+, - power on

(2) CR1 (ADPCM Operation Mode Settings)

	<b>B7</b>	<b>B6</b>	<b>B5</b>	<b>B4</b>	<b>B3</b>	<b>B2</b>	<b>B1</b>	<b>B0</b>
CR1	TX MUTE	RX ON/OFF	ADPCM RESET	TX ON/OFF	RX MUTE	RX MLV2	RX MLV1	RX MLV0
Initial value	0	0	0	0	0	0	0	0

B7: ..... Transmit side ADPCM data MUTE 1: MUTE  
 B6: ..... Receive side PCM signal ON/OFF 0: ON 1: OFF  
 B5: ..... Transmit/Receive side ADPCM RESET (in accordance with the G.721) 1: RESET  
 B4: ..... Transmit side PCM signal ON/OFF 0: ON 1: OFF  
 PCM idle pattern is transmitted when set OFF  
 B3: ..... Receive side ADPCM data MUTE 1: MUTE  
 Mute operation set by B2, 1, 0 is available, provided this bit is valid when MUTE pin is "0".  
 B2, 1, 0: ..... Receive side voice path mute level settings  
 (MLV2, MLV1, MLV0) = (0, 0, 0) : through  
 (0, 0, 1) : -6 dB  
 (0, 1, 0) : -12 dB  
 (0, 1, 1) : -18 dB  
 (1, 0, 0) : -24 dB  
 (1, 0, 1) : -30 dB  
 (1, 1, 0) : -36 dB  
 (1, 1, 1) : MUTE

Note: The above settings are not applied to various tone, side tone, and background noise.

(3) CR2 (PCM CODEC Operation Mode Settings and Transmit/Receive Gain Adjustment)

	<b>B7</b>	<b>B6</b>	<b>B5</b>	<b>B4</b>	<b>B3</b>	<b>B2</b>	<b>B1</b>	<b>B0</b>
CR2	TX GAIN3	TX GAIN2	TX GAIN1	TX GAIN0	RX GAIN3	RX GAIN2	RX GAIN1	RX GAIN0
Initial value	0	0	0	0	0	0	0	0

B7, B6, B5, B4: .... Transmit side signal gain adjustment (refer to Table 2)

B3, B2, B1, B0: .... Receive side signal gain adjustment (refer to Table 2)

**Table 2 Transmit/Receive Gain Settings**

B7	B6	B5	B4	Transmit Side Gain	B3	B2	B1	B0	Receive Side Gain
1	0	0	0	-16 dB	1	0	0	0	-16 dB
1	1	0	1	-14 dB	1	1	0	1	-14 dB
1	0	1	0	-12 dB	1	0	1	0	-12 dB
1	0	1	1	-10 dB	1	0	1	1	-10 dB
1	1	0	0	-8 dB	1	1	0	0	-8 dB
1	1	0	1	-6 dB	1	1	0	1	-6 dB
1	1	1	0	-4 dB	1	1	1	0	-4 dB
1	1	1	1	-2 dB	1	1	1	1	-2 dB
0	0	0	0	0 dB	0	0	0	0	0 dB
0	0	0	1	+2 dB	0	0	0	1	+2 dB
0	0	1	0	+4 dB	0	0	1	0	+4 dB
0	0	1	1	+6 dB	0	0	1	1	+6 dB
0	1	0	0	+8 dB	0	1	0	0	+8 dB
0	1	0	1	+10 dB	0	1	0	1	+10 dB
0	1	1	0	+12 dB	0	1	1	0	+12 dB
0	1	1	1	+14 dB	0	1	1	1	+14 dB

The above gain settings table shows the transmit/receive voice signal gain settings and the transmit side gain settings for DTMF tones and other tones. Tone signal transmission is enabled by CR4 - B6 (discussed later), and the gain setting is set to the levels shown below.

DTMF tones (low group):..... -16 dBm0

DTMF tones (high group) and other tones: ... -14 dBm0

For example, if the transmit gain set value is set to +8 dB (B7, B6, B5, B4) = (0, 1, 0, 0), then the following tones appear at the PCMSO pin.

DTMF tones (low group):..... -8 dBm0

DTMF tones (high group) and other tones: ... -6 dBm0

However, the gain of the receive side tone and the gain of the side tones (path from transmit side to receive side) are set by the CR3 register.

(4) CR3 (Side Tone and Tone Generator Gain Adjustment)

	B7	B6	B5	B4	B3	B2	B1	B0
CR3	Side Tone GAIN2	Side Tone GAIN1	Side Tone GAIN0	TONE ON/OFF	TONE GAIN3	TONE GAIN2	TONE GAIN1	TONE GAIN0
Initial value	0	0	0	0	0	0	0	0

B7, B6, B5: ..... Side tone gain adjustment (refer to Table 3)

B4: ..... Tone generator ON/OFF 0: OFF 1: ON

B3, B2, B1, B0: . Tone generator Receive side gain adjustment (refer to Table 4)

**Table 3 Side Tone Gain Settings**

B7	B6	B5	Side Tone Gain
0	0	0	OFF
0	0	1	-15 dB
0	1	0	-13 dB
0	1	1	-11 dB
1	0	0	- 9 dB
1	0	1	- 7 dB
1	1	0	- 5 dB
1	1	1	- 3 dB

**Table 4 Receive Side Tone Generator Gain Settings**

B3	B2	B1	B0	Tone Generator Gain	B3	B2	B1	B0	Tone Generator Gain
0	0	0	0	-36 dB	1	0	0	0	-20 dB
0	0	0	1	-34 dB	1	0	0	1	-18 dB
0	0	1	0	-32 dB	1	0	1	0	-16 dB
0	0	1	1	-30 dB	1	0	1	1	-14 dB
0	1	0	0	-28 dB	1	1	0	0	-12 dB
0	1	0	1	-26 dB	1	1	0	1	-10 dB
0	1	1	0	-24 dB	1	1	1	0	- 8 dB
0	1	1	1	-22 dB	1	1	1	1	- 6 dB

The receive side tone generator gain settings shown in Table 4 are set with the following levels as a reference.

DTMF tones (low group): ..... -2 dBm0

DTMF tones (high group) and other tones: ... 0 dBm0

For example, if the tone generator gain set value is set to -6 dB (B3, B2, B1, B0)=(1, 1, 1, 1), then tones at the following levels appear at the SAO or VFRO pin.

DTMF tones (low group): ..... -8 dBm0

DTMF tones (high group) and other tones: ... -6 dBm0

(5) CR4 (Tone Generator Operation Mode and Frequency Settings)

	B7	B6	B5	B4	B3	B2	B1	B0
CR4	DTMF/ OTHERS SEL	TONE SEND	TONE5	TONE4	TONE3	TONE2	TONE1	TONE0
Initial value	0	0	0	0	0	0	0	0

B7: ..... Selection of DTMF signal and other tones  
 (S tone, F tone, R tone, etc.) 0: Other tones 1: DTMF tones  
 B6: ..... Transmission side tone transmit  
 0: Voice signal transmit 1: Tone transmit  
 B5, B4, B3, B2, B1, B0: .. Tone frequency setting (refer to Table 5)

**Table 5 DTMF Signal and Other Tone Settings**

(a) When B7 = 1 (DTMF Tones)

(8) CR7 (Detect Register: Read-only)

	<b>B7</b>	<b>B6</b>	<b>B5</b>	<b>B4</b>	<b>B3</b>	<b>B2</b>	<b>B1</b>	<b>B0</b>
CR7	VOX OUT	Silent Level 1	Silent Level 0	—	—	—	Busy	RPM
Initial value	0	0	0	0	0	0	0	0

B7: ..... Transmit side voice/silence detection      0: Silence      1: Voice

B6, B5: ..... Transmit side silence level (indicator)

(0,0): Below -60 dBm0      (0,1): -50 to -60 dBm0

(1,0): -40 to -50 dBm0      (1,1): Above -40 dBm0

Note: These outputs are enabled when the voice/silence detect function is turned on by CR6 - B7.

B4, B3, B2: .Not used

B1: ..... Serial Register I/F monitoring

Monitors address read and write operation of serial register interface.

0: Stop      1: Read or Write

B0: ..... Monitors serial register recording or playback.

0: Stop      1: Recording or playing back

(9) CR8 (Start X address 0-7)

	<b>B7</b>	<b>B6</b>	<b>B5</b>	<b>B4</b>	<b>B3</b>	<b>B2</b>	<b>B1</b>	<b>B0</b>
CR8	ST0	ST1	ST2	ST3	ST4	ST5	ST6	ST7
Initial value	0	0	0	0	0	0	0	0

CR9 (Start X address 8-12)

	<b>B7</b>	<b>B6</b>	<b>B5</b>	<b>B4</b>	<b>B3</b>	<b>B2</b>	<b>B1</b>	<b>B0</b>
CR9	ST8	ST9	ST10	ST11	ST12	—	—	—
Initial value	0	0	0	0	0	0	0	0

CR8 (B7 - B0), CR9 (B7 - B3): Record and Playback start address store register

(10) CR10 (Stop Y address 0-7)

	<b>B7</b>	<b>B6</b>	<b>B5</b>	<b>B4</b>	<b>B3</b>	<b>B2</b>	<b>B1</b>	<b>B0</b>
CR10	SPY0	SPY1	SPY2	SPY3	SPY4	SPY5	SPY6	SPY7
Initial value	0	0	0	0	0	0	0	0

CR10 (B7 - B0): Record and Playback stop Y address store register

(11) CR11 (Stop X address 0-7)

	<b>B7</b>	<b>B6</b>	<b>B5</b>	<b>B4</b>	<b>B3</b>	<b>B2</b>	<b>B1</b>	<b>B0</b>
CR11	SP0	SP1	SP2	SP3	SP4	SP5	SP6	SP7
Initial value	0	0	0	0	0	0	0	0

CR12 (Stop X address 8-12)

	<b>B7</b>	<b>B6</b>	<b>B5</b>	<b>B4</b>	<b>B3</b>	<b>B2</b>	<b>B1</b>	<b>B0</b>
CR12	SP8	SP9	SP10	SP11	SP12	—	—	—
Initial value	0	0	0	0	0	0	0	0

CR11 (B7 - B0), CR12 (B7 - B3): Record and Playback stop X address store register

Note: The data in CR8 - CR12 may be changed under the following conditions. If so, rewrite the data.

- (1) When REC or Play command is executed during the state of start address = stop address
- (2) When stop command is executed during the state of no operation of serial register interface (Busy = RPM = "0")

(12) CR13 (Channel Selection)

	<b>B7</b>	<b>B6</b>	<b>B5</b>	<b>B4</b>	<b>B3</b>	<b>B2</b>	<b>B1</b>	<b>B0</b>
CR13	CH0	CH1	CH2	CH3	CH4	—	ADRD	ADWT
Initial value	0	0	0	0	0	0	0	0

B7 - B3 .....Channel selection (All 32 channels are selected with Hex cord)

B2 .....Since reserved for TEST, this bit should always be set to "0".

B1 .....Address read instruction

0: NOP

1: When set to "1", start/stop address corresponding to the channels specified by B7 to B3 is transferred from serial register channel index area to CR8 - CR12. After transfer, this bit is reset to "0".

B0 .....Address write instruction

0: NOP

1: When set to "1", start/stop address corresponding to the channels specified by B7 to B3 is transferred from CR8 - CR12 to serial register channel index area. After transfer, this bit is reset to "0".

Note : Writing to ADRD and ADWT is inhibited when BUSY (CR7 - B1) or RPM (CR7 - B0) is "1".

## DATA CONFIGURATION IN THE EXTERNAL SERIAL REGISTER

### X Address Space

The address space of the external serial register is accessed based on (word direction indicated by the X address) × (1 Kb depth in Y direction). The maximum X address in word direction depends on the total memory of serial registers connected. Since the leading 32 words (32 Kb) of the serial register are used as the channel index area, X address 020h onward can be used as the voice data area.

CR5-B5	0	1	1
Total Memory Capacity (device name)	1 Mb (MSM63V89C)	4 Mb (MSM6684)	8 Mb (MSM6685)
Number of words	1K words	4K words	8K words
X address*	000h to 3FFh	0000h to 0FFFh	0000h to 1FFFh

\* 0000h to 001Fh is used as the channel index area.

### Y Address Space

For 1 Kb ADPCM data in Y direction, 4 bits × 256 samples = 1024 bits are stored in the 1 Kb memory area. One Y address is allocated to one sample (4 bits) of ADPCM data and addressing is made with 00h to FFh.

Figure 7 Address Space of the 1 Mb Serial Register

**Channel Index Area of the Serial Register**

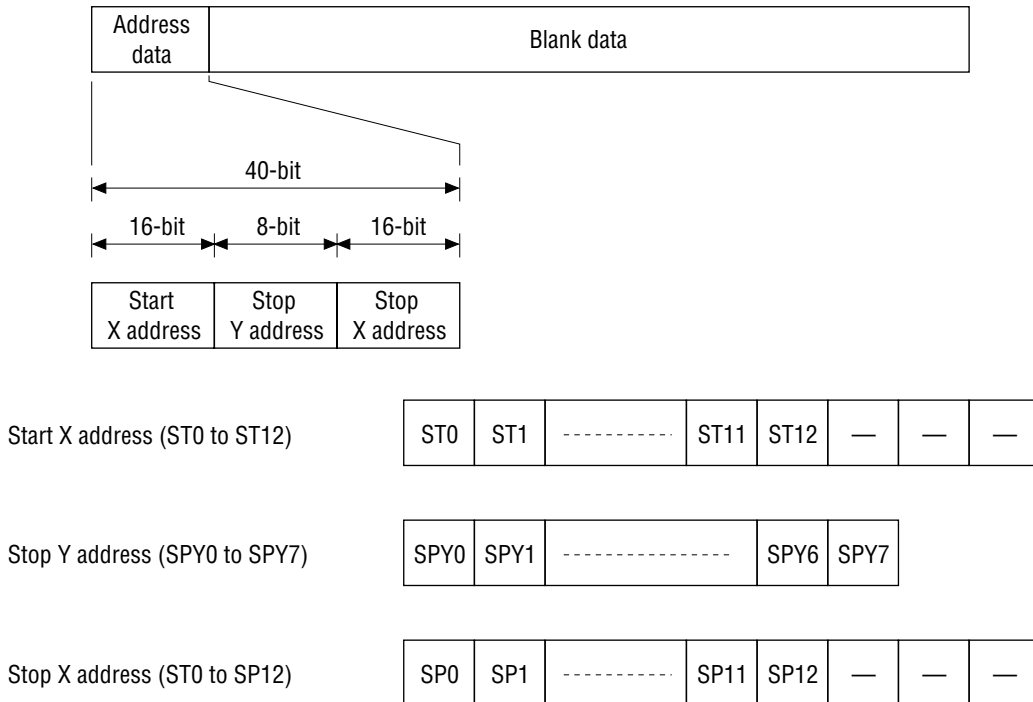

One channel (1 Kb) of the channel index area consists of the 40 bits of address data.

(1) Stop Y address

The Y address is represented by 8 bits and addressing is made with 00h to FFh.

(2) Start X address, stop X address

The X address is represented by 16 bits (valid 13 bits). If, for example, the serial register is 1Mb, the 1K-word X address space is addressed with 000h to 3FFh.

**Figure 8 Channel Index Area of the Serial Register**

## METHODS OF RECORDING AND PLAYBACK

### Recording Method (See the flow chart in Figure 9.)

- (1) • Set up the connection between the serial register / voice ROM and ADPCM transmit-receive system. (See Figure 11.) (CR5 - B7)
  - Specify the serial register/voice ROM. (CR5 - B6)
  - Set the external capacity. (CR5 - B5)
  - Set the NOP command. (CR5 - B1 = "0", B0 = "0")
- (2) • Set the start/stop address. (CR8 to CR12)
- (3) • Set the channel. (CR13 - B7 to B3)
  - Set the ADWT (address write) instruction. (CR13 - B1 = "0", B0 = "1")
- (4) • The start/stop address of the channel set by the ADWT instruction is stored in the channel index area. When status register BUSY (CR7 - B1) changes from "1" to "0", storage is complete.
- (5) • Start recording by setting the REC (recording) command (CR5 - B1 = "1", B0 = "0"). In this case, the basic setting of CR5 - B7 to B5 should be the same as (1).
- (6) • Check the recording start with the status register RPM bit (CR7 - B0 = "1").
- (7) • To interrupt during recording, set the STOP (stop) command (CR5 - B1 = "1", B0 = "1"). In this case, to store the address counter contents in the channel index area as a new stop address, the following settings are required:
  - Set the channel.
  - Set the ADWT instruction.
  - When the BUSY bit changes from "1" to "0", settings are complete.
- (8) • When the address counter reaches the stop address, recording is complete. Check completion of recording with RPM bit = "0".

Note: If the stop address value is smaller than the start address value, recording is made to the last address of the serial register.

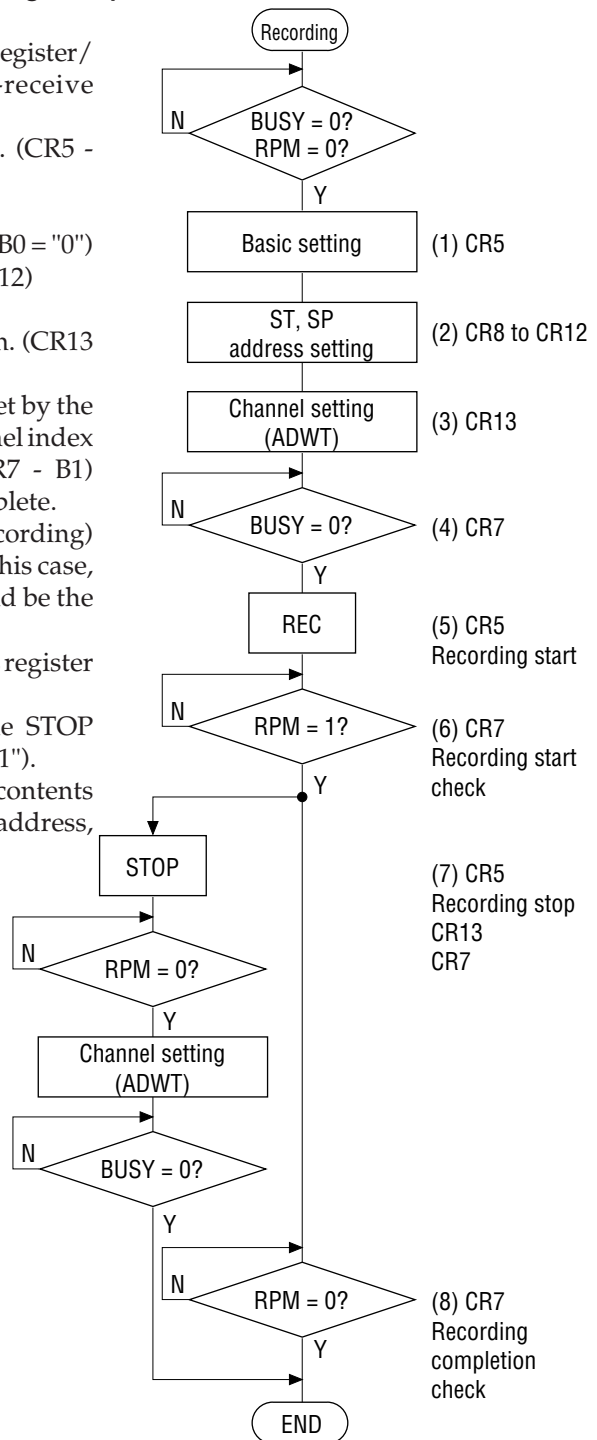

Figure 9 Flow Chart of Recording

**Playback Method (See the flow chart in Figure 10.)**

- (1) • Set up the connection between the serial register/voice ROM and ADPCM transmit-receive system. (See Figure 11.) (CR5 - B7)
  - Specify the serial register/voice ROM. (CR5 - B6)
  - Set the external capacity. (CR5 - B5)
  - Set the NOP command. (CR5 - B1 = "0", B0 = "0")
- (2) • Set the channel. (CR13 - B7 to B3)
  - Set the ADRD (address read) instruction. (CR13 - B1 = "1", B0 = "0")
- (3) • For playback of the voice ROM, set the start/stop address here.
- (4) • The start/stop address of the channel set by the ADRD instruction is fetched from the channel index area.
 

When status register BUSY (CR7 - B1) changes from "1" to "0", fetching is complete.
- (5) • Start playback by setting the PLAY (playback) command (CR5 - B1 = "0", B0 = "1"). In this case, basic setting of CR5 - B7 to B5 should be the same as (1).
- (6) • Check the playback start with the status register RPM bit (CR7 - B0 = "1").
- (7) • To stop playback set the STOP (stop) command (CR5 - B1 = "1", B0 = "1").
- (8) • When the address counter reaches the stop address, playback is complete.
 

Check completion of playback with RPM bit = "0".

**Figure 10 Flow Chart of Playback**

Note: If the stop address value is smaller than the start address value, playback is made to the last address of the serial register.

**SIGNAL FLOW IN RECORDING/PLAYBACK**

When the serial register is connected to each ADPCM transmit and receive system, the flow of recording/playback signal is as follows:

**Figure 11 Signal Flow in Transmit/Receive Side Recording/Playback**

### APPLICATION CIRCUIT

An application circuit is shown below using a 1 Mb serial register and a 1 Mb serial voice ROM.

**PACKAGE DIMENSIONS**

(Unit : mm)

**Notes for Mounting the Surface Mount Type Package**

The SOP, QFP, TSOP, SOJ, QFJ (PLCC), SHP and BGA are surface mount type packages, which are very susceptible to heat in reflow mounting and humidity absorbed in storage. Therefore, before you perform reflow mounting, contact Oki's responsible sales person for the product name, package name, pin number, package code and desired mounting conditions (reflow method, temperature and times).
