SN74ALVCHS162830 1-BIT TO 2-BIT ADDRESS DRIVER WITH 3-STATE OUTPUTS

SCES097F - APRIL 1997 - REVISED JUNE 1999

- Member of the Texas Instruments Widebus™ Family
- EPIC[™] (Enhanced-Performance Implanted CMOS) Submicron Process
- Output Ports Have Equivalent 26-Ω Series Resistors, So No External Resistors Are Required
- Diodes on Inputs Clamp Overshoot
- ESD Protection Exceeds 2000 V Per MIL-STD-883, Method 3015; Exceeds 200 V Using Machine Model (C = 200 pF, R = 0)
- Latch-Up Performance Exceeds 250 mA Per JESD 17
- Bus Hold on Data Inputs Eliminates the Need for External Pullup/Pulldown Resistors
- Packaged in Thin Very Small-Outline Package

NOTE: For order entry:

The DBB package is abbreviated to G.

For tape and reel:

The DBBR package is abbreviated to GR.

description

This 1-bit to 2-bit address driver is designed for 2.3-V to 3.6-V V_{CC} operation.

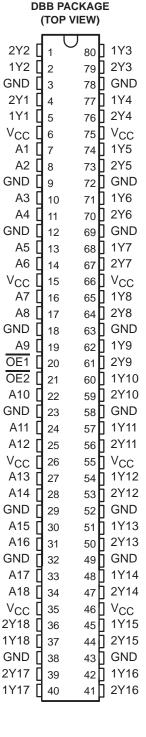

Diodes to $V_{\mbox{\footnotesize CC}}$ have been added on the inputs to clamp overshoot.

Active bus-hold circuitry is provided to hold unused or floating data inputs at a valid logic level.

The outputs, which are designed to sink up to 12 mA, include equivalent $26-\Omega$ series resistors to reduce overshoot and undershoot.

To ensure the high-impedance state during power up or power down, the output-enable (\overline{OE}) input should be tied to V_{CC} through a pullup resistor; the minimum value of the resistor is determined by the current-sinking capability of the driver.

The SN74ALVCHS162830 is characterized for operation from -40°C to 85°C.

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

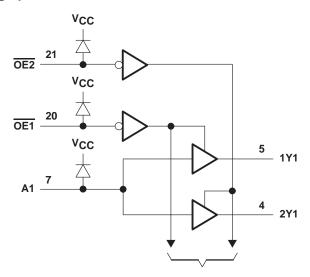

EPIC and Widebus are trademarks of Texas Instruments Incorporated.

FUNCTION TABLE

logic diagram (positive logic)

To 17 Other Channels

absolute maximum ratings over operating free-air temperature range (unless otherwise noted)†

Supply voltage range, V _{CC}	
Input voltage range, V _I (see Note 1)	–0.5 V to 4.6 V
Output voltage range, VO (see Notes 1 and 2)	0.5 V to V _{CC} + 0.5 V
Input clamp current, $I_{ K }(V_1 < 0)$	
Output clamp current, I _{OK} (V _O < 0)	–50 mA
Continuous output current, IO	±50 mA
Continuous current through each V _{CC} or GND	±100 mA
Package thermal impedance, θ _{JA} (see Note 3)	106°C/W
Storage temperature range, T _{stg}	–65°C to 150°C

[†] Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

- NOTES: 1. The input negative-voltage and output voltage ratings may be exceeded if the input and output current ratings are observed.
 - 2. This value is limited to 4.6 V maximum.
 - 3. The package thermal impedance is calculated in accordance with JESD 51.

SN74ALVCHS162830 1-BIT TO 2-BIT ADDRESS DRIVER WITH 3-STATE OUTPUTS SCES097F - APRIL 1997 - REVISED JUNE 1999

recommended operating conditions (see Note 4)

			MIN	MAX	UNIT
Vcc	Supply voltage	2.3	3.6	V	
VIH	$V_{CC} = 2.3 \text{ V to } 2.7 \text{ V}$		1.7		V
	High-level input voltage	$V_{CC} = 2.7 \text{ V to } 3.6 \text{ V}$	2		V
\/	Low level input veltore	$V_{CC} = 2.3 \text{ V to } 2.7 \text{ V}$		0.7	V
VIL	Low-level input voltage	$V_{CC} = 2.7 \text{ V to } 3.6 \text{ V}$		0.8	V
٧ _I	Input voltage	0	VCC	V	
٧o	Output voltage		0	VCC	V
		V _{CC} = 2.3 V		-6	
lон	High-level output current	$V_{CC} = 2.7 \text{ V}$		-8	mA
		V _{CC} = 3 V		-12	
		V _{CC} = 2.3 V		6	
loL	Low-level output current	$V_{CC} = 2.7 \text{ V}$		8	mA
	V _{CC} = 3 V			12	
Δt/Δν	Input transition rise or fall rate			10	ns/V
TA	Operating free-air temperature		-40	85	°C

NOTE 4: All unused control inputs of the device must be held at V_{CC} or GND to ensure proper device operation. Refer to the TI application report, Implications of Slow or Floating CMOS Inputs, literature number SCBA004.

[†] All typical values are at V_{CC} = 3.3 V, T_A = 25°C. ‡ This is the bus-hold maximum dynamic current. It is the minimum overdrive current required to switch the input from one state to another.

PARAMETER MEASUREMENT INFORMATION $V_{CC} = 2.5 \text{ V} \pm 0.2 \text{ V}$

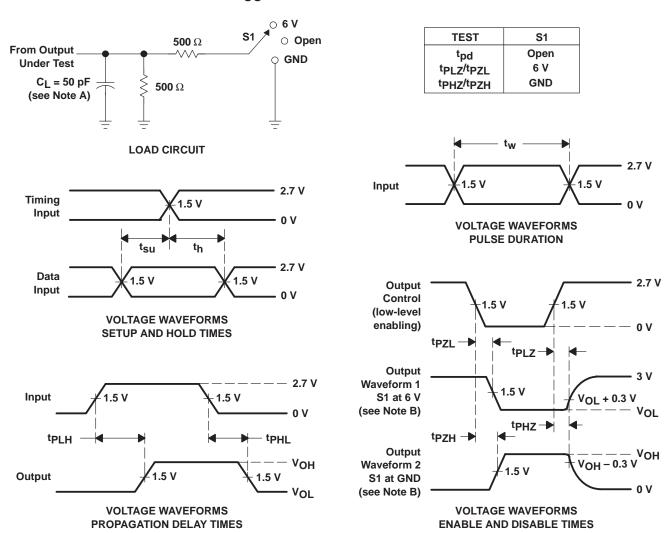

NOTES: A. C_L includes probe and jig capacitance.

- B. Waveform 1 is for an output with internal conditions such that the output is low except when disabled by the output control. Waveform 2 is for an output with internal conditions such that the output is high except when disabled by the output control.
- C. All input pulses are supplied by generators having the following characteristics: PRR \leq 10 MHz, $Z_0 = 50 \Omega$, $t_f \leq 2$ ns.
- D. The outputs are measured one at a time with one transition per measurement.
- E. tpLz and tpHz are the same as tdis.
- F. tpzL and tpzH are the same as ten.
- G. tpLH and tpHL are the same as tpd.

IMPORTANT NOTICE

Texas Instruments and its subsidiaries (TI) reserve the right to make changes to their products or to discontinue any product or service without notice, and advise customers to obtain the latest version of relevant information to verify, before placing orders, that information being relied on is current and complete. All products are sold subject to the terms and conditions of sale supplied at the time of order acknowledgement, including those pertaining to warranty, patent infringement, and limitation of liability.

TI warrants performance of its semiconductor products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are utilized to the extent TI deems necessary to support this warranty. Specific testing of all parameters of each device is not necessarily performed, except those mandated by government requirements.

CERTAIN APPLICATIONS USING SEMICONDUCTOR PRODUCTS MAY INVOLVE POTENTIAL RISKS OF DEATH, PERSONAL INJURY, OR SEVERE PROPERTY OR ENVIRONMENTAL DAMAGE ("CRITICAL APPLICATIONS"). TI SEMICONDUCTOR PRODUCTS ARE NOT DESIGNED, AUTHORIZED, OR WARRANTED TO BE SUITABLE FOR USE IN LIFE-SUPPORT DEVICES OR SYSTEMS OR OTHER CRITICAL APPLICATIONS. INCLUSION OF TI PRODUCTS IN SUCH APPLICATIONS IS UNDERSTOOD TO BE FULLY AT THE CUSTOMER'S RISK.

In order to minimize risks associated with the customer's applications, adequate design and operating safeguards must be provided by the customer to minimize inherent or procedural hazards.

TI assumes no liability for applications assistance or customer product design. TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right of TI covering or relating to any combination, machine, or process in which such semiconductor products or services might be or are used. TI's publication of information regarding any third party's products or services does not constitute TI's approval, warranty or endorsement thereof.
