

2,097,152 WORDS X 32 BIT DYNAMIC RAM MODULE

PRELIMINARY

DESCRIPTION

The THM322020S is a 2,097,152 words by 32 bits dynamic RAM module which assembled 16 pcs of TC514400J on the printed circuit board. The THM322020S can be as well used as 4,194,304 words by 16 bits dynamic RAM module, by means of connecting DQ0 and DQ16, DQ1 and DQ17, DQ2 and DQ18, ..., DQ15 and DQ31, respectively. The THM322020S is optimized for application to the systems which are required high density and large capacity such as main memory of the computers and as image memory systems, and to the others which are requested compact size.

FEATURES

- 2,097,152 words by 32 bits organization
- Fast access time and cycle time
- Single power supply of 5V ±10%
- Low Power
4,708mW MAX. Operating (THMxxxxxx-80)
4,048mW MAX. Operating (THMxxxxxx-10)
88mW MAX. Standby
- $\overline{\text{CAS}}$ before $\overline{\text{RAS}}$ refresh, $\overline{\text{RAS}}$ only refresh, Hidden refresh, and Fast Page Mode capability.
- All inputs and outputs TTL compatible.
- 1024 Refresh cycles/16ms
- Tin-Lead Contact : THM322020S-80, 10
- Gold Contact : THM322020SG-80, 10

CAPACITANCE ($V_{CC} = 5V \pm 10\%$, $f = 1MHz$, $T_a = 0 \sim 70^\circ C$)

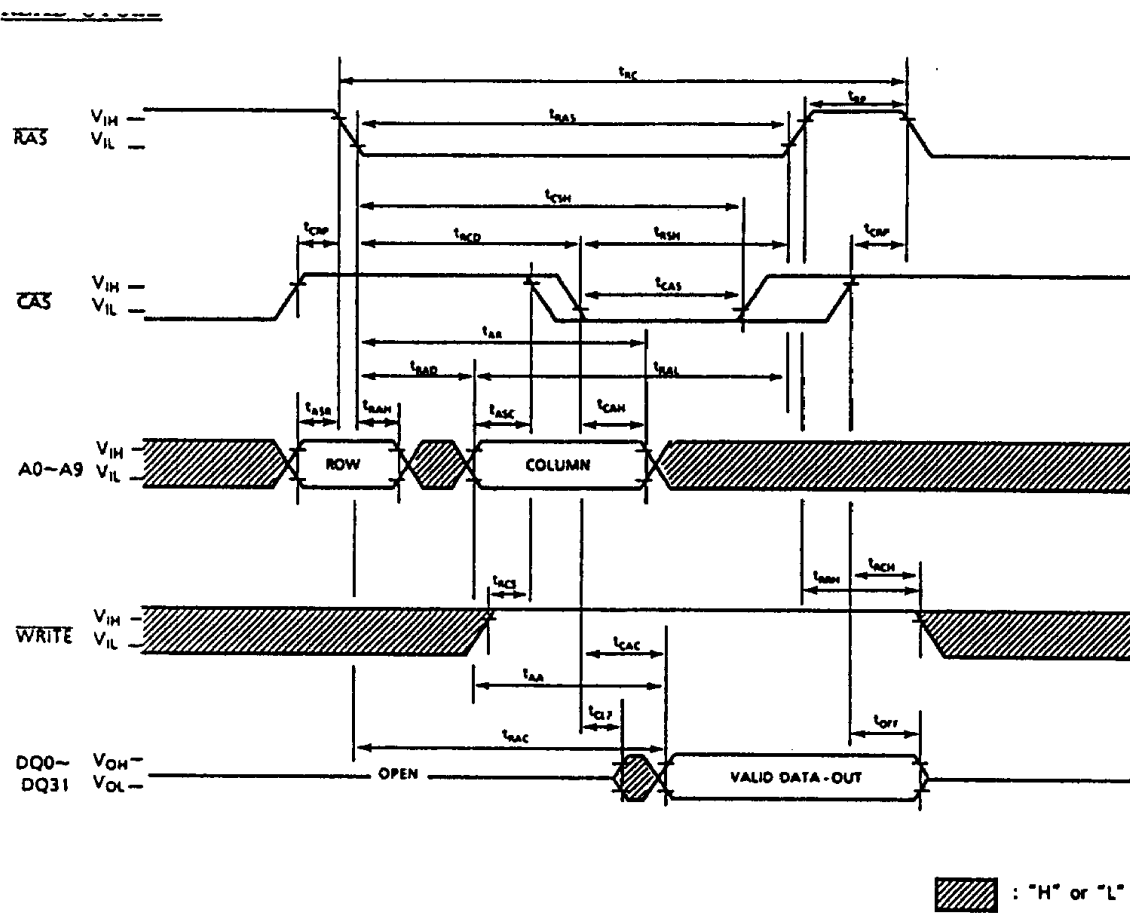

SYMBOL	PARAMETER	MIN.	MAX.	UNIT
C11	Input Capacitance (A0-A9)	-	161	pF
C12	Input Capacitance (\overline{V})	-	168	pF
C13	Input Capacitance ($\overline{RAS0} \sim \overline{RAS3}$)	-	42	pF
C14	Input Capacitance ($\overline{CAS0} \sim \overline{CAS3}$)	-	42	pF
CDQ1	I/O Capacitance (DQ0-31)	-	29	pF

NOTES:

1. Stresses greater than those listed under "Absolute Maximum Ratings" may cause permanent damage to the device.
2. All voltages are referenced to V_{SS} .
3. I_{CC1} , I_{CC3} , I_{CC4} , I_{CC6} depend on cycle rate.
4. I_{CC1} , I_{CC4} depend on output loading. Specified values are obtained with the output open.
5. An initial pause of 200 μ s is required after power-up followed by 8 \overline{RAS} cycles before proper device operation is achieved. In case of using internal refresh counter, a minimum of 8 \overline{CAS} before \overline{RAS} initialization cycles instead of 8 \overline{RAS} cycles are required.
6. AC measurements assume $t_T=5$ ns.
7. $V_{IH}(\text{min.})$ and $V_{IL}(\text{max.})$ are reference levels for measuring timing of input signals. Also, transition times are measured between V_{IH} and V_{IL} .
8. Measured with a load equivalent to 2 TTL loads and 100pF.
9. $t_{OFF}(\text{max.})$ defines the time at which the output achieves the open circuit condition and is not referenced to output voltage levels.
10. Either t_{RCH} or t_{RRH} must be satisfied for a read cycle.
11. These parameters are referenced to \overline{CAS} leading edge.
12. t_{WCS} is not restrictive operating parameters. This is included the data sheet as electrical characteristics only. If $t_{WCS} \geq t_{WCS}(\text{min.})$, the cycle is an early write cycle and data out pin will remain open circuit (high impedance).
13. Operation within the $t_{RCD}(\text{max.})$ limit insures that $t_{RAC}(\text{max.})$ can be met. $t_{RCD}(\text{max.})$ is specified as a reference point only: If t_{RCD} is greater than the specified $t_{RCD}(\text{max.})$ limit, then access time is controlled by t_{CAC} .
14. Operation within the $t_{RAD}(\text{max.})$ limit, insures that $t_{RAC}(\text{max.})$ can be met. $t_{RAD}(\text{max.})$ is specified as a reference point only: If t_{RAD} is greater than the specified $t_{RAD}(\text{max.})$ limit, then access time is controlled by t_{AA} .
