

# HMC6343

## Errata (corrigendum) Sheet

1. The VDD4 no longer requires a connection to positive supply voltage. HMC6343 parts with date codes newer than 0742 (year/week) require open circuiting VDD4 on pin 10. Older devices still require the supply connection. Damage will be done to the new HMC6343 parts if the supply is connected to VDD4. See the picture below.
